Medical Response to the Boston Marathon Bombing: Lessons Learned

Monday, November 6, 2017
Program 7:00-9:00 p.m. • Registration at 6:30 p.m.
Miami Cancer Institute, First Floor Cafe
Sponsored by
the Baptist Health Emergency Preparedness and Security Department

OVERVIEW
Despite the nature and severity of the injuries experienced by victims of the Boston Marathon bombing, the survival rate was astoundingly high. Adequate preparation, rapid logistical response, short transport times, immediate access to operating rooms, methodical multidisciplinary care delivery and good fortune all contributed to excellent outcomes. Even though mass casualty incidents from natural or man-made events remain a constant global threat, due to the workloads and other factors, healthcare providers may sometimes not recognize or may underprioritize the importance of their participation in emergency preparedness activities. Dr. Michael Zinner and Dr. Harry Salinas will describe firsthand the series of events and the lessons learned throughout and after the Boston Marathon Bombing.

TARGET AUDIENCE
Emergency Medicine and Urgent Care Physicians, General Internists, Family Practitioners, Psychologists, Hospitalists, Physician Assistants, Nurse Practitioners, Nurses, Radiologic Technologists, Social Workers, Respiratory Therapists, Clinical Chaplains, Pharmacists, other interested healthcare providers and members of Emergency Medical Services/Fire Rescue, law enforcement, and public health service agencies.

REGISTRATION
For complete details and to register online, go to BaptistHealth.net/CME.
For assistance, contact the CME Department at CME@BaptistHealth.net or 786-596-2398.
